Mathias Pohl, Ph.D., is an Assistant Research Professor at the Colorado School of Mines’ Geophysics Department. After focusing his laboratory studies on hydrate-bearing sediments during his doctoral research (conducted at CSM), he is now working on multi-physics rock measurements as a function of pressure and CO2 saturation for Machine Learning application.

In addition to his current research, Mathias can be found guiding current graduate students as well as retrieving new research possibilities for the Center for Rock Abuse group.

Outside of Mathias’s passion for crushing rocks, he is a husband and father to twin baby girls. Originally being from Germany, he enjoys outdoor adventure and worldwide travel.
